

TREAT • TRANSFORM • SUSTAIN

WHO WE ARE

ABOUT SIEC WATER

VISION

A world where every drop of water is valued, treated and reused responsibly—helping communities, industries and cities thrive through sustainable water solutions.

MISSION

To lead in delivering smart, integrated and sustainable water & wastewater infrastructure—advancing environmental progress through innovation, circular practices and resilient design.

A specialized division of Sustainable Integrated Environmental Consultant (SIEC), delivering innovative water solutions:

Water Treatment (WTP)

Sewage Treatment (STP)

Effluent Treatment (ETP)

SIEC WATER | Treat • Transform • Sustain

ENGINEERING
THE FUTURE OF
WATER

INNOVATION

Smart technologies and advance engineering for future-ready solutions

SUSTAINABILITY

Circular water and resource management for a better planet

PERFORMANCE

Reliable, efficient and optimized systems that deliver results

TRUST

Built on integrity, transparency and long-term partnerships

Delivering intelligent, sustainable and high – performance water infrastructure solutions for industries, communities and smart cities.

Smart Solutions

Operational
Excellence

Quality Assurance

Environment
Responsibility

OUR ADVANTAGE

WHY CHOOSE SIEC WATER

Delivering trusted, innovative and sustainable water solutions that create long-term value for our clients and the environment.

UNCOMPROMISED QUALITY & TRUSTED GLOBAL COMPONENTS

We use premium-grade materials and globally trusted components to ensure reliability, durability, and consistent performance.

CUTTING-EDGE TECHNOLOGIES

We leverage advanced technologies and digital solutions to deliver high-performance, future-ready water systems.

SUSTAINABLE & INTELLIGENT DESIGN PRINCIPLES

Our solutions are designed for resource efficiency, circularity, and minimal environmental impact.

QUALITY CONTROL BY FOLLOWING WORLD CLASS STANDARDS

Rigorous quality control at every stage to ensure consistent excellence and reliability.

PROVEN TRACK RECORD ACROSS INDUSTRIES & SMART CITIES

Successful delivery of diverse projects across industrial sectors, municipalities, and critical infrastructure.

END-TO-END CAPABILITIES FROM CONCEPT TO COMMISSIONING

Complete in-house expertise from consulting and design to execution, commissioning, and O&M support.

IN-HOUSE FABRICATION

State-of-the-art facility and skilled workforce ensure precision, quality and on-time delivery.

VALUE ENGINEERING

Optimized design and engineering for maximum performance, reduced life cycle cost and better ROI.

TESTED. VERIFIED. DELIVERED.

Each system is tested and validated for performance, safety and long-term operation.

RELIABLE AFTER-SALES SUPPORT

Responsive support and maintenance services for uninterrupted operations and peace of mind.

TRANSPARENT & ETHICAL EXECUTION

We follow the highest standards of integrity, transparency, and safety in all our engagements.

COMMITMENT TO CONTINUOUS IMPROVEMENT

We constantly evolve through innovation, learning and feedback to deliver greater value.

OUR SUCCESS STORY

A growing record of trust, quality and engineering excellence.

SIEC

An Emerging Face in the Sustainability Sector Offering a Complete Spectrum of Environmental Consulting Services for Businesses

Sustainability has become inevitable, and undoubtedly, its significance will grow exponentially in the coming years. It needs to be incorporated into every industry, whether on a small or large scale! Here is when the important role of a partner who has an adept understanding of developing a greener way of doing things takes center stage.

Sustainable Integrated Environmental Consultants (SIEC) is one such confidant that never leaves a chance to make a positive impact on the environment. Whether it's helping with environmental management, sustainability practices, or using smart technology, the team at SIEC sticks around to make sure clients' environmental goals are in line with the latest standards.

As we sat down for a hearty conversation with SIEC's Managing Director and CEO, Mr. Amit Gandhi, we delved deeper into the journey of his brainchild. We also had swift overviews of the company's values and strategies for the future, which we have compiled in this draft for our readers.

Prime Insights: What prompted the conceptualization of the company, and what specific market opportunities or gaps did you identify and address?

The decision to start our company was not just a spur-of-the-moment choice; it was a long-term plan that I had envisioned for years. After spending the past 17 years overseas, primarily in Singapore and Australia, I was particularly engaged in smart city and environmental projects. There, I recognized a significant potential in the market for the introduction of sustainable practices. Throughout my involvement in various projects, I noticed a common challenge: *the technologies and innovations developed were not effectively reaching the end users.* This often led to projects remaining at the concept level without proper implementation.

The realization struck me that, to truly make a difference, it was essential to bridge the gap between innovative concepts and practical implementation. By prioritizing sustainability and offering innovative solutions, we aim to not only address environmental challenges but also contribute to the successful

implementation of impactful projects. Our goal is to create a company that not only envisions a sustainable future but actively works towards making it a reality.

Prime Insights: What were the prominent challenges that came your way during the initial years?

Having not previously worked in India, my comprehension of administrative processes, regulations, and taxation was entirely unfamiliar to me. This inevitably led to some delays in getting started. However, as the saying goes, *"If you do that, then only you can say that you are in business."* I'm pleased with how this process has educated me and allowed me sufficient time to organize and establish a well-structured company.

Navigating the complex landscape of sustainability and translating these concepts for stakeholders was a tough challenge. At times, we found that sustainability seemed distant from ground reality. However, we are proud to announce that we have successfully overcome this challenge by adopting a simplified communication strategy. We now wholeheartedly embrace these critical aspects in both our operational practices and communication efforts. From starting the company, getting funding, and building a great team, we've learned a lot.

Prime Insights: Can you quickly walk us through the company's service portfolio?

SIEC provides an extensive range of services within the environmental sector. Our offerings encompass:

Environmental Management Systems (EMS): Assisting clients in implementing and maintaining effective environmental management systems, ensuring compliance with regulatory standards, and aligning with sustainability goals.

Water and Wastewater Projects: SIEC delivers comprehensive solutions for water and wastewater management, covering

ENVIRONMENT CONSULTANTS

SUSTAINABLE INTEGRATED ENVIRONMENTAL CONSULTANTS

Environmental Solutions For A Sustainable Future

The Environmental Consulting Market in India has witnessed significant growth, with the market size estimated at \$43.86 billion in 2024 and projected to reach \$61.62 billion by 2029. India has emerged as a prominent player, focusing on addressing environmental concerns through innovative projects and initiatives. Collaborative efforts between the government and private sector have led to developing indigenous solutions, setting an example for global environmental conservation efforts. The environmental consultancy sector faces challenges such as perceived high costs, leading clients to consider it an unnecessary expense. Additionally, there's a risk of receiving generalized solutions as consultancies may lack a comprehensive understanding of current innovations and sustainability concepts.

Sustainable Integrated Environmental Consultants (SIEC) is a leading environmental consulting firm committed to providing innovative solutions for sustainable development, specializing in wastewater management, intelligent utilities, and digitalization support. The company tackles challenges by adopting a personalized approach, understanding individual client needs, and offering customized solutions leveraging extensive global expertise and up-to-date technological insights.

SIEC embarked on its journey to address global environmental challenges, leveraging its expertise and core values. Over time, the company has evolved into a reputable brand known for its reliability and innovative solutions across various sectors. Clients regularly entrust the company with environmental initiatives, showcasing confidence in its capabilities. Strong partnerships have been forged to offer comprehensive solutions, underscoring the firm's commitment to making a positive impact. While specific revenue growth figures are unavailable, the company stands on solid financial footing, enabling independent funding for upcoming projects. Geographically, the company has expanded its footprint beyond India to countries like Thailand, Indonesia, and the Middle East. Ventures into digitization and innovative city projects through SIEC Innotech have garnered praise, reflecting the company's adaptability and forward-thinking approach.

Innovating Environmental Excellence

SIEC offers a diverse range of specialized environmental management services tailored to meet clients' unique needs across various sectors. These include implementation of Environmental Management Systems (EMS), water and wastewater project management, sustainability integration consulting, smart utilities development, and digitalization support. "From ensuring regulatory compliance to promoting sustainable practices and enhancing operational efficiency through digital technologies, our company is a comprehensive partner in addressing environmental challenges and fostering sustainability across industries. The firm strives to deliver innovative solutions that contribute to a greener and more sustainable future," says Amit Gandhi, Managing Director, SIEC.

SIEC stands out in the environmental consultancy landscape due to its multifaceted expertise and innovative approach to addressing environmental challenges. With a strong focus on wastewater management, the company offers comprehensive solutions ranging from Sewage Treatment Plants (STP) to Effluent Treatment Plants (ETP) and Zero Liquid Discharge (ZLD) systems, all geared towards maximizing value extraction and promoting circular economy principles. The company's emphasis on sustainability extends to its utility infrastructure design consultancy services, where smart and sustainable solutions are developed to optimize resource usage, enhance operational efficiency, and promote environmental responsibility. The firm's commitment to driving sustainability is evident in its incorporation of cutting-edge technology: reduced footprint designs, and IoT-enabled monitoring systems, ensuring that client projects meet regulatory standards and contribute to a greener and more sustainable future.

SIEC aims to expand globally, establishing offices in Southeast Asia and the Middle East while reinforcing its presence in India. The company plans to focus on integrating sustainability with smart technologies, mainly through its Innotech division. Additionally, the company intends to introduce new verticals centered around sustainability and environmental practices to diversify its service offerings.

EXPERTIES

PURE WATER, PERFECTLY ENGINEERED

Ensures that every drop is delivered with purity, performance, & precision

WASTEWATER REINVENTED

We don't just treat wastewater we transform it into a valuable resource

RECLAIM REUSE RESTORE

Every drop reclaimed is a step toward sustainability reimagine waste as a resource, and water as a circular asset

SMART SUSTAINABILITY IN EVERY DROP

Every drop treated is a step toward climate safety, compliance, and long-term excellence

INTELLIGENCE THAT POWERS WATER

Ensures that your water infrastructure isn't just reactive, it's proactive, responsive, and future-ready

SUPPLIES THAT POWER PURITY

Providing more than materials delivering purity, value, and trust in every drop

PURE WATER, PERFECTLY ENGINEERED

Design and Development of Water Treatment System

- 1** — Precision Process Engineering
Comprehensive raw water characterization, process optimization, and customized treatment train selection for achieving targeted water quality standards.
- 2** — Intelligent Automation & Digital Control
Integrated SCADA, IoT-enabled instrumentation, real-time monitoring, predictive diagnostics, and centralized operational control systems.
- 3** — High-Efficiency Resource Optimization
Optimized recovery rates, reduced specific energy consumption, hydraulic efficiency enhancement, and minimized operational footprint.
- 4** — Modular & Scalable Plant Architecture
Skid-mounted modular systems with flexible configurations designed for future capacity expansion and lifecycle adaptability.

Ensures that every drop is delivered with purity, performance, & precision.

PURE WATER, PERFECTLY ENGINEERED

DESALINATION SYSTEM

Transforming Saline Water into Sustainable Freshwater Solutions

At SIEC Water, we deliver **advanced desalination systems** engineered to convert seawater, brackish water, and high-TDS sources into high-quality usable water. Our systems combine cutting-edge membrane technologies with intelligent process control to:

- Maximize water recovery and process efficiency
- Reduce energy consumption through optimized pressure management and Energy Recovery Devices (ERD)
- Minimize membrane fouling, scaling, and operational stress
- Utilize corrosion-resistant materials for enhanced durability in high-salinity environments
- Maintain stable operating pressure for improved membrane life and system performance.

Designed for industrial, municipal, and infrastructure applications, our desalination solutions provide a **sustainable answer** to increasing water scarcity challenges.

KEY FEATURES

-  High Water Recovery Efficiency
-  Energy Efficient Operation
-  Advanced RO Membrane Technology
-  Automated SCADA/IoT Integration
-  Modular & Scalable Design
-  Reduced Operating Cost
-  Long Term Reliability
-  Minimal Environmental impact

APPLICATION

Industrial Water Supply

Municipal Water Systems

Power Plant

Coastal Infrastructure

Resorts & Communities

Mining Operations

“

Delivering **sustainable freshwater solutions** from every source

PURE WATER, PERFECTLY ENGINEERED

REVERSE OSMOSIS SYSTEM

Advanced Membrane Technology For High Purity Water

SIEC Water's **Reverse Osmosis systems** utilize advanced membrane separation technology to remove dissolved salts, ions, heavy metals, organics, and other contaminants from water.

Designed for **maximum efficiency and reliability**, our RO systems consistently deliver high-quality water while optimizing recovery and reducing operating costs.

Our modular and scalable RO solutions are suitable for a wide range of industrial, commercial, and municipal applications, ensuring **purity, performance, and sustainability**.

KEY FEATURES

-  High Water Recovery Efficiency
-  Energy Efficient Operation
-  Advanced RO Membrane Technology
-  Automated SCADA/IoT Integration
-  Modular & Scalable Design
-  Low Maintenance
-  Energy Efficient

APPLICATION

Industrial Process Water

Municipal Water Systems

Power Plant Feed Water

Pharmaceutical & Healthcare

Hotels & Communities

Electronics & Semiconductors

“

Delivering consistent **purity** through advanced RO technology.

PURE WATER, PERFECTLY ENGINEERED

ULTRA FILTRATION SYSTEM

Advanced Membrane Technology for Superior Water Clarity & Protection

SIEC Water's **Ultra Filtration (UF) Systems** utilize advanced membrane separation technology to effectively remove suspended solids, colloids, bacteria, viruses, and high molecular-weight contaminants from water.

Designed for superior filtration efficiency and operational reliability, our UF systems ensure **consistent water quality** while reducing chemical consumption and pretreatment requirements.

Our modular and scalable UF solutions are integrated with intelligent **automation and monitoring systems**, making them ideal for industrial, municipal, and water reuse applications.

KEY FEATURES

-  High Suspended Solids Removal Efficiency
-  Effective Bacteria & Virus Removal
-  Low Chemical Consumption
-  Automated Backwash Operation
-  Modular & Compact Design
-  SCADA / IoT Integration
-  Energy Efficient Operation
-  Reliable Long - Term Performance

PURE WATER, PERFECTLY ENGINEERED

ION EXCHANGE SYSTEM

Advanced Resin Technology for High-Purity Water Treatment

SIEC Water's **Ion Exchange Systems** utilize advanced resin-based technology to selectively remove dissolved ions and impurities from water.

The process efficiently exchanges undesirable ions such as calcium, magnesium, nitrates, silica, and heavy metals with desirable ions, ensuring **superior water quality and process reliability**.

Our intelligent and customized systems are engineered for high performance, operational efficiency, and **long-term sustainability** across industrial and commercial applications.

KEY FEATURES

-  High Purification Efficiency
-  Effective Hardness Removal
-  Selective Ion Removal
-  Reduced Scaling & Fouling
-  Regeneration Capability
-  Compact & Modular Design
-  Automated Operation
-  Long - Term Reliability

APPLICATION

Industrial Process Water

Municipal Water Systems

Water Reuse & Recycling

Pharmaceutical & Healthcare

Food & Beverage Industry

Chemical Plant

“

Delivering **high-purity water** through intelligent ion exchange technology.

PURE WATER, PERFECTLY ENGINEERED

CONDENSATE POLISHING UNIT SYSTEM

Advanced Resin Technology for High-Purity Water Treatment

SIEC Water's **Condensate Polishing Unit (CPU) Systems** are designed to remove dissolved impurities, suspended particles, corrosion products, silica, and ionic contaminants from condensate streams to ensure high-purity water recovery.

Our systems utilize advanced **ion exchange resins, filtration technologies, and intelligent monitoring systems** to protect boilers, turbines, and steam generation equipment while improving plant efficiency and reducing operating costs.

Engineered for superior performance and operational reliability, CPU systems maximize condensate **reuse** and **minimize freshwater** consumption.

WASTEWATER REINVENTED

Comprehensive Sewage Treatment Solutions

- 1 Biological Process Optimization**
Advanced biological treatment technologies including MBBR, MBR, SBR, ASP, and hybrid systems designed for enhanced organic load reduction and nutrient removal.
- 2 Intelligent Process Monitoring & Control**
Integrated SCADA systems, online analyzers, IoT-enabled sensors, and real-time monitoring for process stability and operational efficiency.
- 3 Resource Recovery & Circular Integration**
Optimized wastewater reuse, sludge valorization, nutrient recovery, and water recycling strategies aligned with circular economy principles.
- 4 Energy & Operational Efficiency**
Optimized aeration systems, reduced energy consumption, minimized sludge generation, and lifecycle-based operational cost reduction.

RECLAIM REUSE RESTORE

Water Recycling, ZLD & Resource Recovery

- 1** Integrated Water Recovery Technologies
Advanced treatment systems incorporating tertiary treatment, membrane processes, ZLD systems, and resource recovery technologies for maximum water reclamation.
- 2** Circular Water Management Strategy
Implementation of closed-loop water systems to minimize freshwater dependency and maximize reuse efficiency across operations.
- 3** Resource Optimization & Sustainability
Recovery of reusable water, nutrients, and valuable by-products through optimized process integration and sustainable design principles.
- 4** Intelligent Monitoring & Performance Control
Real-time process monitoring, automated control systems, predictive analytics, and performance optimization for reliable water recovery operations.

SUSTAINING
EVERY DROP

Every drop reclaimed is a step toward sustainability—reimagine waste as a resource, and water as a circular asset.

ZERO LIQUID DISCHARGE

KEY BENEFITS

ZERO LIQUID DISCHARGE

Eliminates liquid discharge and ensures environmental compliance.

WATER RECOVERY

Up to **95–98% water recovery** for reuse in process, cooling, and utilities.

RESOURCE RECOVERY

Recovery of salts and by-products for reuse or safe disposal.

LOWER OPEX

Energy-efficient technologies and process integration reduce operating costs.

REGULATORY COMPLIANCE

Meets stringent environmental norms and sustainability goals.

FUTURE READY

Scalable, modular solutions designed for evolving industrial needs.

OUR ZLD PROCESS FLOW

TECHNOLOGIES WE USE

High Recovery RO Systems
Advanced membranes for maximum water recovery

Multi-Effect Evaporators (MEE)
Proven technology for efficient evaporation

Thermal Vapor Compression (TVC)
Energy-efficient evaporation solution

Crystallizers & Dryers
Robust systems for salt crystallization and drying

Energy Recovery Devices (ERD)
Recover & reuse energy for lower OPEX

Automation & Smart Control
Real-time monitoring, analytics & process optimization

Integrated Water Management & Sustainable Infrastructure

- 1** — Resource-Efficient System Design
Implementation of energy-efficient equipment, optimized hydraulic design, and reduced resource consumption to improve overall system performance.
- 2** — Circular Economy Integration
Adoption of water reuse, waste minimization, resource recovery, and sustainable process strategies to maximize environmental value.
- 3** — Environmental Compliance & ESG Alignment
Design and operation aligned with regulatory requirements, sustainability benchmarks, carbon reduction initiatives, and ESG objectives.
- 4** — Intelligent Sustainability Monitoring
Integrated SCADA platforms, IoT-enabled sensors, energy analytics, and real-time performance monitoring for sustainable operational management.

Gasification DTA ETP Project

Industrial ETP

- RIL, Jamnagar, Gujarat, India
- Consultancy & engineering advisory services

Gasification SEZ TTP Project

Treatment System

- RIL, Jamnagar, Gujarat, India
- Consultancy & engineering advisory services

Effluent Treatment Plant — S-Cube

100 m³/day

- S-Cube Mass Transfer, India
- EPC: Wastewater/effluent treatment system delivery

Dorf Ketal ATFD + MEE ZLD Plant

1 m³/day

- Dorf Ketal Chemicals India Ltd, India
- EPC: Wastewater/effluent treatment system delivery

EFFLUENT TREATMENT (ETP) & ZLD PROJECTS

ETP Refurbishment — Sustro

100 m³/day Upgrade

- Sustro Speciality Oils Pvt. Ltd., India
- EPC: Wastewater/effluent treatment system delivery

Croc Gold Mining WWTP — Phase 1

17.5 MLD

- Northern Territories, Australia
- EPC: Wastewater/effluent treatment system delivery

Croc Gold Mining WWTP — Phase 2

17.5 MLD

- Northern Territories, Australia
- EPC: Wastewater/effluent treatment system delivery

Zero Liquid Discharge Plant — NMDC

6 MLD

- India
- EPC: Wastewater/effluent treatment system delivery

EFFLUENT TREATMENT (ETP) & ZLD PROJECTS

SATS WWTP — Zero Liquid Discharge

WWTP-ZLD System

- Singapore
- EPC: Wastewater/effluent treatment system delivery

Roy Hill Iron Ore Process WWTP

0.15 MLD

- Client: Brookfield Multiplex, W. Australia
- EPC: Wastewater/effluent treatment system delivery

MCC CP Mining WWTP

1 MLD

- Karratha, Western Australia
- EPC: Wastewater/effluent treatment system delivery

IOCL Paradip ETP Revamping

Revamping

- IOCL Paradip, Odisha, India
- EPC: Wastewater/effluent treatment system delivery

CONSULTANCY, ENGINEERING & WATER TREATMENT PROJECTS

WTP & STP Operations Improvement Study

Utility Optimization

- Indira Gandhi Intl. Airport (IGIA), India
- Consultancy & engineering advisory services

King Saud University Infrastructure

970 ha

- Riyadh, Saudi Arabia
- Consultancy & engineering advisory services

Sultan Haitham City Infrastructure

1,540 ha

- Ministry of Housing & Development, Oman
- Consultancy & engineering advisory services

Ellington Properties Infrastructure

Integrated Development

- Dubai, UAE
- Consultancy & engineering advisory services

Petronas WTP & Lake System Review

Water Infra Review

- Petronas, Malaysia
- Consultancy & engineering advisory services

Wastewater Infrastructure Review — MoPWH

Infra Review

- Ministry of Public Works & Housing, Indonesia
- Consultancy & engineering advisory services

CONSULTANCY, ENGINEERING & WATER TREATMENT PROJECTS

MEP Design — STP, Desal & Utility Systems

Utility Infra Design

- Singha Estate Pvt Ltd, Thailand
- Consultancy & engineering advisory services

Water Treatment Plant

9.6 MLD

- Ratnagiri Gas and Power Pvt Ltd, India
- Consultancy & engineering advisory services

Demineralization Plant

4.8 MLD

- Rajasthan Atomic Power Station, Kota, India
- Consultancy & engineering advisory services

Ultra-Pure Water Plant + RO-DI Loop

2.2 MLD

- A*Star, Singapore
- EPC: Water/process treatment system delivery

Condensate Polishing Plant

7 MLD

- IRPC Public Company Ltd, Thailand
- EPC: Water/process treatment system delivery

Water Treatment Plant — Balikpapan

3 MLD

- DKI, Balikpapan, Indonesia
- EPC: Water/process treatment system delivery

CONSULTANCY, ENGINEERING & WATER TREATMENT PROJECTS

Water Treatment Plant — Givaudan

1 MLD

- Givaudan, Jakarta, Indonesia
- EPC: Water/process treatment system delivery

Condensate Polishing Plant — IRPC UHV

7 MLD

- Rayong, Thailand
- EPC: Water/process treatment system delivery

Drinking Water Treatment Plant

0.2 MLD

- Fleetwood Golder's Village, W. Australia
- EPC: Water/process treatment system delivery

Water Treatment Plant — MCC CP Mining

0.3 MLD

- Karratha, Western Australia
- EPC: Water/process treatment system delivery

Drinking Water Treatment Plant — Pluto LNG

0.1 MLD

- Karratha, Western Australia
- EPC: Water/process treatment system delivery
